DIVISION 1:PROJECT DESCRIPTION

PROJECT DESCRIPTION

The City of Oregon Sanitary Sewer Rehabilitation Project Trunk Sewers and Miscellaneous Lateral Improvements project is intended to improve the overall condition and quality of the existing sanitary sewers in various areas of the City of Oregon. The existing sanitary sewers, ranging in size from 8-inch to 24-inch diameter, are deteriorated and are in need of lining as called out on the project drawings. Some sewers have been lined previously and need cleaning to remove settled debris in the pipe. The project will use a cured-in-place lining process to rehabilitate existing sanitary sewer pipes. This project also includes the rehabilitation of sanitary sewer lateral pipe by trenchless cured-in-place lining in various areas as shown on the project drawings. Sanitary sewer manholes will also to be lined.
